Acknowledgements

First and foremost, all praises, thanks and syukur to Allah (S.W.T) to give us strength and ability to complete this book.

We would like to take this opportunity to express our highest appreciation to our colleagues in the Ocean and Aerospace Research Institute, Indonesia, Universiti Teknologi Malaysia and Institut Teknologi Sepuluh Nopember, Indonesia to provide proper guidance, encouragement, invaluable ideas, comment, recommendation, critics, suggestions and advice that to assist us for the successful completion of this book.

To our families that always pray for our successful, all this things cannot pay for all what they all have done. Our special thanks also to our postgraduate students.

Above this all, our highest praises, thanks and syukur to Almighty Allah Subhanahu Wa'Talla, the most gracious the most merciful, who gave us the knowledge, courage and patience to accomplish this project. May the peace and blessings of Allah be upon Prophet Muhammad Sallallahu Alaihi Wasallam.

The authors are grateful to all friends, institutions and parties for supporting this book.

List of Figures

Figures	Description	Page
Figure.1.1.a	Main parts of components of a ship	14
Figure.1.1.b	Types of ships and offshore structures	15
Figure.1.2.a	Examples of high-speed craft	16
Figure.1.2.b	Components of Custom high speed picker boat	16
Figure.1.3	Examples of Offshore Oil Vessels	17
Figure.1.4.a	Fishing Vessel	18
Figure.1.4.b	Components of Catcher boat	18
Figure.1.5	Examples of harbour work crafts	19
Figure.1.6.a	Examples of dry cargo ships	20
Figure.1.6.b	Components of General Cargo Ship	20
Figure.1.6.d	Components of Container ship	21
Figure.1.7	Liquid cargo ships	22
Figure.1.8	Examples of Passenger ships	23
Figure.1.8.a	Cruise Ship	24
Figure.1.8.b	Components of Car & Passenger Ferry	25
Figure.1.8.c	Components of Catamaran	26
Figure.1.9	Recreational Boats	27
Figure.1.10	Icebreaker ship	28
Figure.1.11	Autonomous Underwater Vehicle (AUV)	28
Figure.1.12.a	Examples of Warships	30
Figure.1.12.b	Submarines	30
Figure.1.13	Typical hull of a ship	32
Figure.1.14	Typical interior hull of ship	32
Figure.1.15	External part of the hull of a ship	33
Figure.1.16	Typical weather decks of a ship	34
Figure.1.17	Construction of a Hull	35
Figure.1.18	Carrier Deck Schematic	37
Figure.1.19	Construction of stem part	39
Figure.1.20	Construction of mid-ship part	40
Figure.1.22	Construction of stern part	42
Figure.1.23	Construction of rudder part	43
Figure.1.24	Construction of rudder bearing	44
Figure.1.26	Construction of Shaft Line	46
Figure.1.27	Construction of Engine Room	46
Figure.1.28	Typical number of components of floating and fixed platforms	48
Figure.1.29	Several offshore structures	49
Figure.1.30	Typical Gravity based Offshore Structure	50
Figure.1.31	Typical of Jack-up	51
Figure.1.32	Different Compliant Structures through the years	52
Figure.1.33	Guyed tower	53
Figure.1.34	Tension Leg Platform	54
Figure.1.35	Articulated Tower	55

Figure.1.36	Floating Production System	56
Figure.1.37	The ongoing operations to an FPSO and the production process	58
Figure.1.38	Truss SPAR DTU in Kikeh, Malaysia	58
Figure.1.39	Three types of SPAR	59
Figure.1.40	Typical of Semi-submersible and TLP	61
Figure.1.41	Typical of Semi-submersible	62
Figure.2.1	Wind load at structure	71
Figure.2.2	Buoyancy loads of structures	73
Figure.2.3	Ice load on a structure	75
Figure.2.4	Block of Ship Structure	78
Figure.2.5	Front view of ship structure	78
Figure.2.6	Different types of framing systems of ships	80
Figure.2.7	Midship section for a double hull oil tanker	81
Figure.2.8	Midship section for a Navy destroyer	81
Figure.2.9	Rationally-based Structural Design	82
Figure.2.10	Levels of structural analysis	83
Figure.2.11	Failure Probabilities	85
Figure.2.12	Stress of structure	87
Figure.2.13	Wave-induced pressure variations on floating structure	89
Figure.2.14	Wave-induced buoyancy distribution	90
Figure.2.15	Hogging and sagging on a floating structure	90
Figure.2.16	Whipping stress due to slamming	92
Figure.2.17	Primary, Secondary and Tertiary Ship Structural Loads	93
Figure.2.18	An example of hull girder bending	94
Figure.2.19	Trapezoid Method	96
Figure.2.20	Biles' Method	97
Figure.2.21	Weight curve for a typical small cargo ship	98
Figure.2.22	An example of a ledger-style spreadsheet for weight accounting and control	99
Figure.2.23	Wave height versus length of ships	101
Figure.2.24	Section area curve calculated using Bonjean method	102
Figure 2.25	Diagrams of strain and stress distribution along the cross-section at cracking and ultimate limit states	105
Figure 2.26	Diagrams. Stress profile for estimating the positive cracking moment of a T-shaped beam	106
Figure 2.27	Diagrams. Strain and stress profiles for estimating the positive nominal moment of a T-shaped beam	107
Figure.4.1	Structures analysis using Finite Element Method	124
Figure.4.2	An example of mesh	125
Figure.4.3	Stress analysis using FEM	126
Figure.4.4	Vibration analysis using FEM	127
Figure.4.5	Fatigue analysis using FEM	128
Figure.4.6	Heat Transfer analysis using FEM	128
Figure.5.1	Uniform prismatic bar	134
Figure.5.2	Simple bar element	135
Figure.5.3	Two axial elements	138
Figure.5.4	Simple two-dimensional truss element	141

Figure.5.5	Plane trusses element in local and global coordinates	142
Figure.5.6	Stress-strain law in isotropic linear elastic	148
Figure.5.7	Simple three-dimensional truss element	149
Figure.5.8	Frames in ship structures	154
Figure.5.9	Beam loading (a) and deformation of the natural axis (b).	155
Figure.5.10	Beam section and stress distribution	155
Figure.5.11	Finite Element discretization	157
Figure.5.12	Hermite shape function	158
Figure.5.13	2-D Element	165
Figure.6.1	Bending and shear stress distributions	169
Figure.6.2	Shear stress in I beam	170
Figure.6.3	Shear force on box-shaped barge	170
Figure.6.4	Shear and stress at midship	172
Figure.6.5	Shear and stress of box-beam with constant plating thickness	173
Figure.6.6.a	Example of shear flow calculation in internal longitudinal bulkheads	179
Figure.6.6.b	Example of shear flow calculation in multi-cell section	180
Figure.6.7	Ship inclined to an angle θ	183
Figure.7.1	Maximum deflection of rectangular plates under uniform pressure	201
Figure.7.2	Maximum stresses in rectangular plates under uniform pressure	202
Figure.7.3	Transverse pressure for small and large deflections	205
Figure.7.4	Membrane effect for long simply-supported plates	207
Figure.7.5	Stress and strain regions	208
Figure.7.6.a	Design curves for plates under uniform pressures	208
Figure.7.6.b	Design curves for plates under uniform pressures	209
Figure.7.6.c	Design curves for plates under uniform pressures	210
Figure.7.6.d	Design curves for plates under uniform pressures	211
Figure.7.6.e	Design curves for plates under uniform pressures	213

Table of Contents

Preface	1
Acknowledgements	2
List of Figures	3
List of Tables	9
Table of Contents	10
1.0. Ships and Offshore Structures	14
1.1. Introduction	14
1.1.1. Types of ships and Offshore Structures	15
1.1.2. Ship Hull	31
1.1.3. Components of Ships	38
1.1.4. Construction of Hull.....	38
1.2. Offshore Structures	47
1.2.1. Fixed Offshore Structures	48
1.2.4. Compliant Structures.....	51
1.2.5 Floating Structures	55
1.2.6. Subsea System.....	61
1.3. Safety regulations for different types of ships and Offshore Structures.....	62
2.0. Load and Moment	64
2.1. Overview	64
2.2. Types of Loading	66
2.2.1. Gravity Loads.....	67
2.2.2. Environmental Loads	68
2.3. Ship and Offshore Structural Components	76
2.4. Ship and Offshore Structural Design Process	82
2.5. Structural “Failure”	83
2.7. Ship Structural Loads	88
2.8. Primary, Secondary and Tertiary Ship Structural Loads.....	92
2.9. Primary Structure: The Hull Girder Bending Concept.....	93
2.10. Weight Curves for Ships	95
2.11. Buoyancy Curves for Ships.....	99
2.12. Moment of Inertia and Section Modulus Calculation	103
2.12.1. Rectangular Cross-Section Behavior.....	104
2.12.2. T-Beam Section Behavior	105
2.13. Composite Beam Approach	110
3.0 Matrix Algebra Method for Engineering	113
3.1 Matrix Algebra.....	113
3.1.1 Addition and Subtraction	114

3.1.2 Scalar Multiplication	115
3.1.3 Matrix Multiplication	115
3.1.4 Transpose Matrix	116
3.1.5 Symmetric Matrix	117
3.1.6 Identity Matrix	117
3.1.7 Determinant of a Matrix	117
3.1.8 Singular Matrix	118
3.1.9 Matrix Inversion	118
3.1.10 Positive Define Matrix	119
3.1.11 Differentiation and Integration of a Matrix	120
4.0. Application of Finite Element in Ships and Offshore Structures	121
4.1 Introduction	121
4.2 What is Finite Element Analysis	122
4.3 How Does Finite Element Analysis Work?	122
4.4 FEA in Engineering Analysis	124
4.5 Types of Finite Elements	128
4.6 Spring Systems	130
4.6.1. One Spring Element	130
4.6.2. Two Spring Elements	131
4.7. Exercises	132
5.0 Introduction to Finite Element	133
5.1 Introduction	133
5.2 The Stiffness Matrix Method	133
5.3 The Stiffness Matrix: Bar Element	134
5.4. Exercises:	138
5.5 Trusses Element	139
5.5.1. 2-D (Plane) Trusses	139
5.5.2 Effect of Temperature	147
5.5.2 3-D Trusses	148
5.6 Beam Element	152
5.6.1. Potential Energy Approach	155
5.6.2. 1-D Beam	156
5.6.3. 2-D Beam	162
5.6.4. 3-D Beam	164
5.7. Stiffness Matrix Analysis – 7 Step Process (Summary):	165
6.0. Shear and Stress of Ship and Offshore Structures	166
6.1 Shear Stress in Small Open Beam Sections	166
6.2. Shear Stress and Shear Flow in Closed and Large Beam Sections	170
6.3. Multi-Cell Shear Flow	177
6.4. Asymmetric Bending: Asymmetric Loading and Asymmetric Sections	181
6.5. Shear Lag and “Effective Breadth”	185
6.5.1. Application of Shear Lag and Effective Breadth – Stiffener Design	189

6.6. Hull–Superstructure Interaction	192
7.0 Ship and Offshore Structures Strength Analysis.....	195
7.1 Tertiary Structure: Plate	195
7.1.1 Boundary Conditions and Plate Bending	195
7.1.2 Small Deflection Plate Theory	196
7.1.3. Large Deflection Plate Bending	202
7.1.4. Effect of Initial Deformation.....	204
7.1.5. Plates Loaded Beyond Their Elastic Limit (“Elastic-Plastic” Design)	206
7.1.6. Design for Permanent Set.....	207
7.2. Secondary Structure	215
7.2.1. Stiffened Panels in Bending	215
8.0 Buckling on Ships and Offshore Structures	217
8.1. Buckling Failure Modes	217
8.2. Buckling of Columns for Ideal Modes	217
8.3. Eccentricity Buckling of Columns	222
8.4. Buckling of Beam Columns	223
8.5. Elastic Plate Buckling Under Uniaxial Compression.....	229
8.6. Elastic Buckling of Plates Due to Biaxial Compression, Shear, and Bending.	234
8.6.1. Biaxial Compression	235
8.6.2. Pure Shear	235
8.6.3. Pure In-Plane Bending	238
8.7. Buckling of Plates Subject to Combined Loads (in-plane and lateral loads).	239
8.8. Ultimate Strength of Plates	242
8.9. Torsional Buckling of Stiffeners -Tripping-	244
8.10. Buckling of Stiffened Panels.....	246
8.10.1. Buckling of a “Gross Panels” (“Grillage Buckling”):.....	250
8.10 Classification Societies.	252
8.11. Reliability Methods	253
9.0 Collision Mechanic on Ships and Offshore Structure	256
9.1 Collision Mechanic	256
9.1.1 External Collision Mechanics	256
9.1.2. Internal Collision Mechanics	259
9.1.3. Response of Steel Tubular Member Subjected to Collision Load.....	260
9.1.4. Accidental Impact Load	261
9.1.5. Manoeuvring	261
9.1.6. Finite Element Method.....	272
10.0 Strength Analysis of Jacket Structure due to Ship Collision.....	277
10.1 Input Variable	277
10.2. Simulation Flowchart	277
10.2.1 ANSYS LS-DYNA Simulation.....	277
10.2.2. Manoeuvring Simulation.....	279
10.2.3 GT-STRUDL Simulation	280

10.2.4 Simulation Description.....	281
10.3. Data Collection	285
10.4. Simulations Results	288
10.4.1. ANSYS LS-DYNA	288
10.4.2. Dynamics Analysis of Jacket Platform	292
10.4.3. Response Analysis of Jacket Structure.....	311
10.4.4. Push over Analysis for Collision Application.....	324
11.0 Fracture of Scantling Support Structure of Gas Processing Module on FPSO	331
11.1. Introduction.....	331
11.2. Fracture Mechanics	332
11.3. Stress Intensity Factor	333
11.4. Crack Propagation.....	334
11.4. Simulation and Discussion	335
11.4.1. Simulation Condition	335
11.4.2. Global Analysis	336
11.4.3. Local Analysis.....	339
11.4.4. Crack Propagation.....	341

Autobiographies

Jaswar Koto was born on October, 1970. He is a descendant of the Prophet Rasullullah S.A.W through Husein R.A. He is a president of Ocean and Aerospace Research Institute, Indonesia and Professor on offshore engineering. He is also president of International Society of Ocean, Mechanical & Aerospace for scientist and engineers.

He has been invited as a Visiting Professor more than 16 times, received several international awards and supervised PhD, Master and Bachelor Students. He received his bachelor degree in 1994 from Institut Teknologi Sepuluh Nopember (ITS), Indonesia, further studies in Curtin University of Technology in marine and Notre Dame University in business and in 2003 he has completed his PhD and also received “Excellence Academic Award” for doctor degree in engineering form Aerospace and Marine Engineering, Osaka Prefecture University, Japan.

He has started his researches since 1994 on structure analysis of fluid flow in subsea pipelines, subsea pipeline corrosion due to Carbon Monoxide, design and hydrodynamic analysis of AUV in Australia. Then, he joined Research and Development Institute, Sumitomo Heavy Industries -Marine Engineering-, Japan. In 2005, he joined ExxonMobil LNG Engineering Plan for Middle East projects. Since 2010, he has contract with Department of Aeronautical, Automotive, and Ocean Engineering, Faculty of Mechanical Engineering. He is also appointed as head of High Performance Computing, CICT, Universiti Teknologi Malaysia.

Agustin Dwi Sumiwi was born on August, 1985. She is a lecturer on Offshore Engineering, Ranaco Education and Training Institute, Ranaco Group of Company, Kemaman, Terengganu, Malaysia. She received his bachelor degree from Institut Teknologi Sepuluh Nopember (ITS),

She received master in Marine Technology, Mechanical Engineering, Universiti Teknologi Malaysia. She has more than 8 years teaching experience. She has involved in several offshore projects.

Handayanu was born on July, 1963. He is a lecturer on Offshore Engineering, Institut Teknologi Sepuluh Nopember (ITS), Surabaya, Indonesia. He received his bachelor degree from Institut Teknologi Sepuluh Nopember (ITS), Indonesia

He received master from University of Strathclyde, UK. In 2002, he has completed his PhD from Memorial University of Newfoundland, Canada. He has more than 23 years teaching experience. His specialist is on fatigue and fracture mechanic and FEM. He has published many papers and also has involved in many offshore projects.

Mufti Fathonah Muvariz is a Lecturer in Department of Mechanical Engineering at Politeknik Negeri Batam, Indonesia, where he teaches in Engineering Mechanic, Strength of Material, and Mathematics. He received his Bachelor's Degree in Ocean Engineering from Institut Teknologi Sepuluh Nopember (ITS), Indonesia.
